CORPORATE FACT SHEET

Profile

Giffels-Webster is a collection of people—civil engineers, landscape architects, planners and surveyors—who choose every day to make communities better. The Michigan-based firm serves public, private, and institutional clients throughout the United States with their infrastructure needs. Since its inception in 1950, Giffels-Webster has evolved to offer a broad scope of services centered on helping clients achieve their project or programming goals.

Three key attributes differentiate Giffels-Webster:

Perspective – Giffels-Webster has cultivated a unique engineering practice through experience in both public- and private-sector projects, which delivers a perspective to customers that results in more cost-effective and creative solutions.

Vision – Giffels-Webster pursues all projects with a view of today and vision for tomorrow to improve the quality of life for the citizens of the communities it serves.

Balance – All sides of an issue are weighed and evaluated with an objective resolution recommended; it's the ability to balance the client's needs, timing, cost, local/state/federal requirements, aesthetics, environmental regulations and functionality.
